Continuation of Substance of Interview including description of the general nature of what was discussed: It has been discussed that the prior art discloses where resources are divided into multiple different classes based on an allocation time, where utilization is measured and an allocation is trigger is based on the measurement(Jurkevich et al (US 5,282,207)). For claim 56,71,85,93,102 the interpretation of characteristic allocation time was an allocated time of a resource (e.g. time slot etc). It has been discussed that applicant's disclosure presents a different interpretation. This interpretation shows that the allocation time is an actual time needed to allocate a resource of a class. With the addition of this interpretation to the claims the prior art does not disclose such features. Lastly, claim 56 and 93 have been determined to be non-statutory since a machine is not needed to implement the method nor does it transform a particle. The applicant agreed to amend those claims by adding a machine that is performing the methods as claim 56 and 93.
